

Nanomix Recognized for Innovation in Healthcare by MedTech Innovator

Emeryville, CA (June 19, 2019) – Nanomix, the leader in the development of mobile, affordable point-of-care diagnostics, with a platform and assays that provide rapid, accurate, quantitative information for use in settings where time-to-diagnosis is critical to clinical decision making and improved patient care, today announced MedTech Innovator has selected Nanomix as one of the 50 Best-in-Class Startups for 2019.

“Nanomix is honored to be chosen from a pool of almost 800 applicants by MedTech Innovator as one of 50 leading medtech startups transforming the healthcare industry”, said David Ludvigson, President and CEO of Nanomix.

About Nanomix:

Nanomix is the leader in the development of mobile point-of-care diagnostics, with a platform and assays that provide rapid, accurate, quantitative information for use in settings where time is critical to clinical decision making and improved patient care. The company’s products are designed to broadly impact health care delivery by bringing diagnostics to the point of initial patient interaction, whether in the hospital or in pre-hospital, remote, or alternative settings, thus enabling faster clinical decision-making and potentially treatment-in-place. Nanomix’s first assay addresses the critical need for faster sepsis diagnosis, but the company is developing a deep pipeline of other high value tests where the rapid availability of high-quality diagnostic information can improve patient outcomes.
